campus event finder

1. Target User

University students who want to discover campus events and activities.

2. Problem Statement

University students struggle to find campus events because event information is shared across different platforms. This matters because students may miss useful learning and social opportunities.

3. Proposed Solution

A simple website that collects campus event information in one place and helps students find activities that interest them.

4. MVP Scope

- Display campus events.
- Filter events by category.
- Show a message when no matching events are found.

5. Functional Requirements

- FR1: Display each event's name, date, location, and category.
- FR2: Allow users to filter events by category.

- FR3: Show a message when no events match the selected category.

6. Non-Functional Requirements

- NFR1: The website shall work on mobile, tablet, and desktop screens.
- NFR2: The website shall provide clear labels and simple controls.

7. User Stories & Acceptance Criteria

US1 — View Events: As a university student, I want to view campus events, so that I can discover available activities.

Acceptance Criteria: Events appear as separate cards, and each card shows the name, date, location, and category.

US2 — Filter Events: As a university student, I want to filter events by category, so that I can find activities that interest me.

Acceptance Criteria: Selecting a category displays matching events only. Clearing the filter restores all events.

US3 — No Matching Events: As a university student, I want to see a helpful message when no events match my filter, so that I understand why no results are displayed.

Acceptance Criteria: A clear message appears when no matches are found, and clearing the filter restores the full list.
